Fleet Maintenance Software
Good Evening Everyone:

Am looking to upgrade the means by which we track vehicles and their respective maintenance and so I am hoping to hear from all of you with regard to what software package you have, the estimated cost, and you level of happiness with it.

Thank you.

IRON EAGLE- Nevada

We use software from US Fleet Tracking.

The system shows location, movement, etc and produces a log that can be converted to an Excel Sheet with a column for costs.

~James Kimsey

OREGON

TEAM OREGON tracks vehicles and maintenance through a Microsoft Access database created in house some years ago. It's served us well though we're always interested in knowing what other solutions exist to accommodate future program needs.

ROADKILL NEW YORK

+I recommend trying AMSOIL's free MyAMSOILGarage. (No, this isn't +SPAM.)

"Whether it is for work or play, there is room for all of your equipment in MyAMSOILGarage. If you can type out the info, you can track it here.
Take the guesswork out of scheduling maintenance for your vehicles and powersports toys by letting the garage remind you what you did last and when to do it again.
Maybe you need to track which products you used with which piece of equipment? There is plenty of room in the Garage for your parts... And don't worry about running out of space - even if you have a whole fleet of equipment to track. You can add and organize everything quickly and run reports to keep everyone in your organization up to speed."

All Vehicles and Equipment Accommodated
Unlimited Maintenance Records

Free for Everyone
Email Reminders
User-Friendly Interface

You're also able to export your data in .csv format, which is handy if you want to manipulate it in your own spreadsheet or save it elsewhere.

Find AMSOIL's MyAMSOILGarage here:

https://www.amsoil.com/whyMyGarage.aspx

If you want to enter an optional referral number, mine is 523520.

Ride on.
