ABS/traction control practice guide

The Skilled Motorcyclist Association – Responsible Trained and Educated Riders, Inc. (SMARTER at www.SMARTER-usa.org) has developed a practice guide for training riders to get the most out of their ABS/traction control equipped motorcycle. The guide contains information on the history of ABS, why ABS is an important safety feature, how ABS and traction control systems work, tips and techniques for braking and descriptions for practice riding activities. No permission is necessary to download and use this curriculum although we would appreciate an e-mail to smarterusa@gmail.com to keep us informed.

The practice guide is available at:
