Question for those involved with State DOT's or road agencies

Do any of you have any guidance documents or language that specifically addresses motorcycles in your roadway infrastructure design, construction, or maintenance activities?

Example: Ohio DOT has design guides for signal loop detection that states the design must detect motorcycles.

Michigan DOT has a provision in their work zone manual that addresses motorcycles in work zones and the need to mitigate certain conditions or post warning signs.

Do other states have any similar or other language addressing motorcyclist safety with respect to the roadway? Thanks

Eric

NEVADA

Nothing in Nevada.....But I am interested in seeing the language in the Michigan work zone manual when you get a chance.

Thanks,
